Alkaline electrolysed "water" 【Alkaline raw water ※pH 13.1】

What is AQUAnax®

AQUAnax is high density "highly alkaline electrolysed water" generated by applying electricity to OH-ion created by reduction reaction. Its hydrogen-ion density is pH 13.1.

Features of AQUAnax®

Maintains quality

AQUAnax raw water keeps pH level of 13.1 even after 8 years when kept in the product bottle at room temperature.

※Ref: Data from 500ml bottle in initial lot of general products (manufactured in 2007)

Safe & effective in cleaning

It maintains similar cleaning capacity as sodium hydroxide (caustic soda). It can be used safely as its main component is water.

Permeability

Molecules are ultrafine; thus permeability is very high. It can even permeate into a water-proof watch.

Prevents static

It does not attract dust as negative ion effective prevents static.

Prevents corrosion

Having a low oxidation-reduction unit, AQUAnax suppresses the function of active oxygen and prevents rust from forming.

Breaking down process

Being strongly alkaline, AQUAnax is highly effective in removing protein and oil.

Sterilisation • virus deactivation • Deodourisation

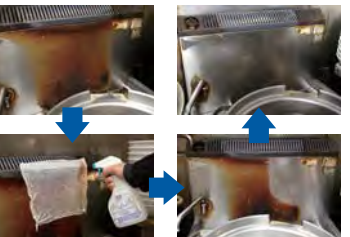

Tests have verified that AQUAnax raw water kills various endogenous bacteria (such as Escherichia coli, Pseudomonas aeruginosa, Salmonella, Enteritis vibrio) and deactivates viruses (such as norovirus).

It is also deodourising.

※ Reference: "AQUAnax Bactericidal Efficiency Test" conducted by a third party organization.

AQUAnax can be diluted by tap water!

AQUAnax® (pH 13.1) • Application & dilution guide

A P P L I C A T I O N	Gas stove and grate, etc	Refrigerator, microwave oven, coffee maker, etc	Around the front entrance, shoe shelves, etc	Food production line, commercial & home kitchen	Stubborn stains in commercial & home kitchen
					
Dilution factor pH	5 fold dilution pH 12.6 / 24°C after dilution				Raw water pH 13.1 / 24°C
U S A G E	① Spray the object directly with AQUAnax and wipe off. For touch oil stains such as in a kitchen or around the grate, wrap the object with paper towel sprayed with AQUAnax. Wipe off after 5-10 minutes. ② Soak a towel with AQUAnax in a bucket and wring. Wipe the object with the towel. ③ Soak the object with AQUAnax in a bucket for 5-10 minutes. Rinse off after dirt has lifted.
